QUALITY POLICY			
Doc No:	A3D00-001	Revision	V1.0
Prepared By:	Pauline Bullock	Approved By:	David Bullock
Effective Date:	15 February 2022		

Akhani 3D provides a comprehensive and professional, production and industrial Additive Manufacturing/3D printing & finishing service.

We are committed to the continual improvement of our quality management system and compliance with all applicable requirements of ISO 9001 the international standard for quality management systems.

We are driven by our purpose: to make ideas possible.

We partner with companies that see the power in harnessing new technology to deliver competitive advantage. Our primary goal in partnerships is to identify customer parts and systems that can be improved using additive manufacturing (AM) technologies, allowing them to innovate and optimise their products and manufacturing workflows.

We achieve this goal by employing proven methodologies, technologies, materials, and equipment in our production workflows and by maintaining strong partnerships with established technology vendors.

The cornerstones of this policy are:

- Our customers' successful adoption of AM technologies is our priority quality measure.
- We strive to consistently provide high quality levels with regards to our products and services and to continuously improve skills, knowledge, know-how, methods and processes.
- Accountability, maintaining high standards and a quality-focus are requirements for all employees.
